

InfusionPoints
Securing Cloud Solutions

Compliance at YOUR Speed RAPIDLY ACHIEVE AN ATO FOR YOUR CLOUD SERVICE

A TURNKEY SOLUTION FOR YOUR FedRAMP COMPLIANCE

Your organization has developed a cloud service offering and would like to achieve your Authority to Operate (ATO) to sell your solution in the federal market. This can be very time consuming and stressful to complete. To provide a more efficient and affordable ATO journey, InfusionPoints developed XBU40. We want to see you reach your business goals and launch your solution into the federal market. XBU40 makes this possible by providing the environment you need, the subject matter experts you trust, and cutting-edge cybersecurity that evolves with the threat landscape.

1

Determine Your Cloud Environment Needs with InfusionPoints

2

Deploy a Pre-Configured Environment with Built in Security Controls

3

Integrate Your Service into the Secure and Compliant Environment

4

Develop Your FedRAMP ATO Package and support the Audit process

5

VNSOC360° Continuous Monitoring and Managed Detection & Response

KEY POINTS

Your Solution + XBU40 = Audit Ready

InfusionPoints is 100% dedicated to making your cloud offering audit ready. In our experience with FedRAMP, controls implementation and documentation is one area where you, as the cloud service provider, can save a lot of time. The XBU40 solution and architecture takes all applicable compliance controls into consideration and sets your organization up to have a minimal number of tasks to complete to be audit ready. InfusionPoints provides a full suite of consulting practices to infuse security into the cloud offering through solution design, development, deployment, operations, and maintenance.

A Secure, Compliant, Expandable, and Affordable Cloud Environment

Your new cloud environment will be tailored specifically to your needs affordably without sacrificing compliance and security. All access, boundaries, components, and compliance requirements are monitored and managed to provide a perfectly configured cloud environment leveraging FIPS 140-2 encryption and hardening techniques that meet FedRAMP standards. Your environment can be configured to accommodate growth and adjusted to meet organizational needs to align with business goals and keep the most efficient environment possible for your cloud solution.

Documentation, Policies, and Procedures

Your organization not only receives a compliant environment packed with compliant security operations, but you also benefit from our FedRAMP experts providing and guiding you through documentation development necessary for your audit and market outreach. This includes the System Security Plan (SSP) and the thirteen FedRAMP attachments necessary to complete in order to be audit ready. It also includes developing compliant policies and procedures that keep your organization operating efficiently while maximizing your compliance efforts.

Security Operations with VNSOC360°

XBU40 comes with the security and continuous monitoring of our Virtual Security Operations Center (VNSOC360°) which makes it the perfect all-in-one solution to house your cloud offering. InfusionPoints leveraged its cloud development, compliance, and security operations services to create the most customer-focused and user-friendly solution to help customers achieve their ATO.

InfusionPoints' XBU40, with Managed Cloud Services and VNSOC360° security monitoring service, provides real-time, security event analysis and response across your security and critical infrastructure 24 hours a day, 7 days a week, 365 days a year, staffed by U.S. Citizen on U.S Soil. Other benefits include:

Boundary Protection	<ul style="list-style-type: none">✓ Monitor and control all boundaries that protects your information systems from malicious activity✓ Control and monitor all communications within the system boundary
